

Hospital Process of Care Measures – National Average

Condition	Category	Measure Name
Surgery patients who were taking heart drugs called beta blockers before coming to the hospital, who were kept on the beta blockers during the period just before and after their surgery	Surgical Care Improvement Project	National Average of Hospitals submitting data:
Surgery patients who were given an antibiotic at the right time (within one hour before surgery) to help prevent infection	Surgical Care Improvement Project	National Average of Hospitals submitting data:
Surgery patients who were given the right kind of antibiotic to help prevent infection	Surgical Care Improvement Project	National Average of Hospitals submitting data:
Surgery patients whose preventive antibiotics were stopped at the right time (within 24 hours after surgery)	Surgical Care Improvement Project	National Average of Hospitals submitting data:
Heart surgery patients whose blood sugar (blood glucose) is kept under good control in the days right after surgery	Surgical Care Improvement Project	National Average of Hospitals submitting data:
Surgery patients needing hair	Surgical Care Improvement	National Average of Hospitals
